

# Large-Flower Tickseed

## *Coreopsis grandiflora*

With cheerful yellow flowers, this plant produces flowers singularly or in few bunches on leafless stems. While not a long-lived perennial, individuals self-sow and sprout easily, so keep this in mind. Birds will eat the seeds as well. If deadheaded, flowers can reappear for a second round, sometimes till September.

- Perennial
- Grows 2 feet
- Found in pinewoods, coastal uplands
